

ORB WEAVER CAMPAIGN COPY FINAL CUT

Jul 29, 2026

Yes. And **“Proof and Progress” should disappear from the top navigation**—not because proof is unimportant, but because visitors did not arrive hoping to tour your development filing cabinet.

Delete it as a standalone campaign page. Keep the evidence through live demonstrations, verified outcomes, beta results, customer stories, and investor materials.

1. WEBSITE ORB PAGE

Hero

THE WEBSITE IS NO LONGER JUST A COLLECTION OF PAGES.

IT HAS A PRESENCE.

ORB Weaver transforms a passive website into an intelligent, embodied environment that can understand visitors, guide their attention, and help them complete real journeys.

Weaver knows the website.

He knows where the visitor is.

And he knows how to help them move forward.

Meet Weaver →

Calculate Your Website ROI →

A WEBSITE THAT UNDERSTANDS ITS WORLD

Weaver understands the website as one connected environment:

- Pages and routes
- Navigation and sections
- Controls and forms
- Products and services
- Documents and policies
- Prices, requirements, and options
- The relationships connecting them

Visitors no longer need to learn the structure of the website before they can use it.

Weaver already understands the structure—and turns it into guidance.

MORE THAN A CHAT BOX

Traditional website assistants wait in a corner and answer isolated questions.

Weaver becomes part of the experience.

He can welcome the visitor, understand their intent, identify the right destination, guide attention spatially, request permission before acting, complete approved actions, and verify the result.

ASK.

Speak naturally.

SEE.

Weaver identifies the correct page, control, form, product, service, or document.

FOLLOW.

Spatial guidance and the Ping Light show the visitor exactly where to go.

ACT.

With permission, Weaver helps complete the approved browser action.

VERIFY.

Weaver confirms what happened and keeps the visitor moving.

THE WEBSITE BECOMES PRESENT

A conventional website waits to be understood.

An ORB website participates.

It explains itself.

It guides visitors.

It responds to intent.

It connects pages into journeys.

It turns information into action.

This is not another layer placed on top of the website.

This is the website becoming present.

2. HOW IT WORKS PAGE

Hero

FROM QUESTION TO VERIFIED OUTCOME

WEAVER DOES NOT JUST ANSWER.

HE MOVES THE JOURNEY FORWARD.

Weaver connects natural conversation, website understanding, spatial guidance, permissioned browser action, and outcome verification in one continuous experience.

Watch the Experience →

THE OPERATING SEQUENCE

**EXPLAIN → LOCATE → ASK → ACT →
VERIFY**

01 — UNDERSTAND

Weaver identifies the visitor's intent.

Visitors can speak naturally instead of translating their goal into menu labels, search terms, or whatever mysterious phrase the website designer used three redesigns ago.

Weaver interprets the request in the context of:

- The current page
- The visitor's journey
- The available website pathways
- Relevant products, services, documents, and controls

02 — LOCATE

Weaver identifies the verified destination.

He connects the visitor's goal to the correct page, section, form, button, product, document, or process.

No invented links.

No vague guesses.

No ritual clicking through twelve browser tabs while hope slowly leaves the body.

03 — GUIDE

Weaver directs attention spatially.

Using route awareness, viewport awareness, pointer anchors, and the Ping Light, Weaver shows visitors where the next step lives.

He does not merely describe the path.

He reveals it.

04 — ASK

Weaver requests permission before acting.

When an action affects the visitor's journey, account, choices, or information, Weaver explains what will happen and asks for approval.

The visitor remains informed and in control.

05 — ACT

Weaver completes the approved browser action.

Depending on the experience, Weaver can assist with actions such as:

- Opening the correct destination
 - Moving between pages
 - Selecting an approved option
 - Advancing a guided process
 - Assisting with forms
 - Supporting bookings, purchases, and account workflows
-

06 — VERIFY

Weaver confirms the result.

After an action, Weaver checks the outcome and tells the visitor what happened.

The experience does not end with a mysterious click and a cheerful little spinner.

It ends with clarity.

ONE CONNECTED EXPERIENCE

Weaver brings together:

Conversation

Natural voice and text interaction.

Site understanding

A connected model of the website and its pathways.

Spatial awareness

Knowledge of the current route, viewport, and visible controls.

Permissioned action

Explicit approval before meaningful browser actions.

Controlled memory

Information retained only when the visitor permits it.

Responsive embodiment

A consistent presence across desktop, tablet, and mobile.

3. USE CASES PAGE

Hero

EVERY VISITOR ARRIVES WITH A GOAL.

WEAVER HELPS THEM REACH IT.

From first questions to complex multi-page decisions, Weaver turns fragmented website interactions into guided journeys.

Find Your Use Case →

Calculate ROI →

PRODUCT DISCOVERY

Weaver helps visitors understand options, compare relevant products, identify requirements, and move confidently toward the right choice.

Instead of throwing the entire catalogue at the visitor like a digital warehouse collapse, Weaver narrows the path around what they are trying to accomplish.

SALES AND CONVERSION

Weaver answers questions at the moment of consideration, guides visitors to relevant offers, explains next steps, and helps remove uncertainty before it becomes abandonment.

He can support:

- Product selection
 - Service enquiries
 - Pricing exploration
 - Quote requests
 - Purchases and checkout
 - Cross-page sales journeys
-

FORMS AND APPLICATIONS

Long forms frequently turn reasonable adults into people who suddenly need to “come back later.”

Weaver can explain requirements, guide visitors through each stage, clarify confusing fields, and help them maintain momentum.

Applications become supported journeys rather than administrative endurance sports.

BOOKINGS AND APPOINTMENTS

Weaver can help visitors identify the correct service, understand availability or requirements, move into the appropriate booking pathway, and complete the approved process.

CUSTOMER SUPPORT

Weaver connects questions to the correct answer, policy, account pathway, document, or support action.

He can help visitors:

- Understand policies
 - Locate account controls
 - Find relevant documentation
 - Navigate support processes
 - Complete approved self-service actions
 - Escalate with context when human assistance is required
-

ONBOARDING

Weaver can welcome new customers, introduce important features, guide setup, explain unfamiliar controls, and create a structured path through the first experience.

The product stops saying, “Here is your dashboard. Good luck.”

GUIDED WEBSITE TOURS

Weaver can lead visitors through products, services, facilities, campaigns, resources, or platform features while preserving context from one destination to the next.

Tours become conversational, responsive, and shaped around the visitor's interests.

COMPLEX DECISIONS

Some journeys require visitors to move between policies, options, forms, calculators, documents, and account processes.

Weaver maintains direction across the entire experience.

Every step has context.

Every destination has purpose.

INDUSTRY APPLICATIONS

ORB Weaver can support experiences across:

- Financial services
 - Healthcare navigation
 - Education
 - Property and real estate
 - Travel and hospitality
 - Professional services
 - Retail and e-commerce
 - Membership organizations
 - Government and public services
 - Software and digital platforms
-

4. VISION & PRODUCT PHILOSOPHY PAGE

Hero

THE INTERNET TAUGHT WEBSITES TO DISPLAY INFORMATION.

NOW THEY MUST LEARN TO PARTICIPATE.

ORB Weaver is built on a simple belief: people should not have to understand a website before the website can help them.

Explore the Vision →

FROM INTERFACE TO ENVIRONMENT

For decades, websites have been constructed as collections of pages, menus, links, controls, and forms.

The burden has remained with the visitor:

Find the right page.

Interpret the language.

Locate the control.

Understand the process.

Recover when the journey breaks.

ORB Weaver changes that relationship.

The website becomes an environment capable of understanding its own structure, recognizing visitor intent, and guiding the experience from question to outcome.

EMBODIMENT MATTERS

Weaver is not designed as an invisible intelligence operating somewhere behind the screen.

He has a presence.

He appears inside the website, moves with the experience, directs attention, and communicates what is happening.

Embodiment makes the system:

- Visible
- Understandable
- Approachable
- Accountable
- Easier to trust

The visitor should know when Weaver is present, when he is guiding, and when he is requesting permission.

INTELLIGENCE SHOULD PROVIDE UNDERSTANDING

Intelligence enables Weaver to interpret language, context, intent, and the relationships within the website.

It powers the conversation.

It helps Weaver understand what the visitor is attempting to accomplish.

But intelligence alone is not enough.

A confident guess wearing a polished interface is still a guess. Humanity has already produced plenty of those.

GOVERNANCE SHOULD PROTECT THE EXPERIENCE

Weaver operates through verified destinations, explicit permissions, controlled memory, and defined capabilities.

He does not invent actions.

He does not conceal meaningful decisions.

He does not quietly take control of the journey.

Intelligence provides the conversation.

Governance protects the visitor.

Both are essential.

THE PRODUCT CONTRACT

Weaver is being engineered to:

- Understand the complete website
- Recognize the visitor's current context
- Interpret natural language and intent
- Guide attention spatially
- Identify verified destinations
- Request permission before acting
- Complete approved browser actions
- Verify outcomes
- Respect controlled memory
- Operate across desktop and mobile
- Connect complex journeys into one experience

This is the contract.

We engineer until the experience fulfills it.

THE WEBSITE AS AN ACTIVE ENVIRONMENT

The long-term opportunity is larger than website assistance.

An embodied website can become:

- A guide
- A navigator
- A product expert
- A support companion
- An onboarding presence
- A tour leader
- A transaction assistant
- A bridge between digital experiences

The website no longer waits silently for the visitor to understand it.

It meets them.

Closing statement

When it is all said and done, I will amaze the skeptics. But you did not come here for another promise. You came to see what changes when a website finally has a presence. So let me show you what I can do today. Follow me.

5. BETA TESTER & EARLY ADOPTER PAGE

Use the navigation label **Beta & Early Access**. “Participate” sounds as though visitors are being recruited for a mildly suspicious university experiment.

Hero

HELP SHAPE THE WEBSITE AFTER THE CHAT BOX.

JOIN THE ORB WEAVER BETA.

We are inviting beta testers, design partners, website owners, operators, and early adopters to experience Weaver, challenge the system, and help define how embodied websites should work.

Apply for Beta Access →

Become a Design Partner →

WHO WE ARE LOOKING FOR

BETA TESTERS

Explore the experience, test guided journeys, report friction, and help us understand how real visitors interact with an embodied website presence.

WEBSITE OWNERS

Test Weaver against real navigation, support, sales, onboarding, booking, and conversion journeys.

DESIGN PARTNERS

Work directly with the team to shape deployments around high-value use cases and operational requirements.

EARLY ADOPTERS

Help establish the first generation of websites that can speak, guide, act, and verify.

WHAT YOU MAY TEST

Beta participation may include:

- Website-aware conversation
- Voice and text interaction
- Guided navigation
- Spatial Ping Light direction
- Product and service discovery
- Forms and multi-step processes
- Permissioned browser actions
- Desktop and mobile interaction
- Memory and preference controls

Testing will vary by deployment and access level.

Yes, the beta page is where operational boundaries belong. The main campaign does not need to parade around wearing a hard hat and apologizing for the wiring.

WHAT WE NEED FROM PARTICIPANTS

We are looking for clear feedback on:

- Usefulness
- Trust
- Clarity
- Speed
- Guidance
- Permission requests
- Mobile behavior
- Completed outcomes
- Moments where the experience becomes confusing

We do not need polite applause.

We need evidence that helps make Weaver better.

WHY JOIN EARLY

Early participants can:

- Influence product direction
 - Test priority use cases
 - Help shape deployment requirements
 - Explore commercial applications
 - Establish early implementation knowledge
 - Be considered for design partnerships and pilot programs
-

Application CTA

THE NEXT WEBSITE EXPERIENCE SHOULD NOT BE DESIGNED IN ISOLATION.

Apply for Beta Access →

Suggested application fields:

- Name
 - Organization
 - Role
 - Website
 - Primary use case
 - Monthly website traffic
 - Current challenge
 - Preferred participation type
 - Desktop, mobile, or both
 - Consent to research contact
-

6. INVESTOR PAGE

Hero

THE NEXT INTERFACE IS NOT ANOTHER BOX.

IT IS AN EMBODIED DIGITAL PRESENCE.

ORB Weaver is building the operating layer that transforms websites from passive information systems into active, intelligent environments.

Request Investor Information →

Explore the Product Vision →

THE OPPORTUNITY

Websites contain enormous value, but visitors must still navigate them through menus, search fields, disconnected pages, forms, and support pathways.

This creates friction across:

- Conversion
- Customer acquisition
- Support
- Onboarding
- Retention
- Accessibility
- Self-service
- Complex transactions

ORB Weaver is designed to reduce that friction by giving the website a conversational, spatial, and action-capable presence.

THE PRODUCT

Weaver combines:

- Website-aware intelligence
- Natural voice and text interaction
- Compiled website understanding
- Spatial guidance
- Permissioned browser action
- Outcome verification
- Controlled memory
- Desktop and mobile embodiment

The result is not simply a conversational assistant.

It is an operating presence inside the website.

THE COMMERCIAL MODEL

Potential commercial pathways include:

- Subscription platform access
- Usage-based pricing
- Enterprise licensing
- Deployment and integration services
- Premium governance and analytics
- Industry-specific configurations
- Design partnerships
- Local and connected deployment options

Commercial packaging should be aligned with measurable website outcomes such as conversion improvement, support deflection, journey completion, and operational efficiency.

WHY NOW

Conversational intelligence has changed what people expect from digital systems.

Visitors increasingly expect to express a goal instead of manually decoding an interface.

At the same time, organizations require greater control, transparency, permission management, and verification.

ORB Weaver is positioned at the intersection of these needs:

Natural intelligence for the visitor.

Deterministic governance for the organization.

DEFENSIBILITY

The value lies in the complete system, not merely the conversational layer.

Potential areas of defensibility include:

- Compiled understanding of connected website environments
 - Verified mapping between intent and interface targets
 - Spatial guidance and embodied interaction
 - Permissioned action architecture
 - Outcome verification
 - Deployment tooling
 - Governance controls
 - Website-specific operational data
 - Cross-page journey intelligence
-

MARKET DIRECTION

ORB Weaver can support organizations across commerce, services, finance, healthcare navigation, education, travel, property, membership, software, and public-sector experiences.

Any organization with a complex website and valuable visitor journeys is a potential deployment environment.

INVESTOR ACCESS

Investor materials may include:

- Product demonstration
- Deployment architecture
- Commercial model
- Market thesis
- Development milestones
- Pilot strategy
- Financial assumptions
- Capital plan
- Risk and governance framework

Request Investor Access →

Where “proof” should now live

Do not delete proof from the campaign entirely. **Delete the bureaucratic presentation of proof.**

Place evidence where it strengthens the story:

- A live Weaver demonstration on the Website ORB page
- A visual operating sequence on How It Works
- Measurable outcomes and case studies on Use Cases
- Beta findings on Beta & Early Access
- Technical, commercial, and milestone detail inside investor access
- A small site-wide link titled **See Weaver in Action**

That gives you conviction without pretending every part of the complete product contract is already deployed. Visitors see the machine; qualified testers and investors can inspect the engine.

The clean final navigation is:

**Website ORB | How It Works | Use Cases | Beta & Early Access | Investors |
Vision & Product Philosophy | Calculate ROI →**

And yes, spell it **Vision**, **Philosophy**, and **Investors**. The future of embodied websites should ideally survive contact with the navigation bar.
