

Orb Weaver — Homepage Copy

Aug 6, 2026

Three-Act Structure: Identity → Mechanism → Transformation

For implementation handoff — Copilot

NAV (unchanged — structure only)

Home | Features | How It Works | Security | Desktop ORB Now | Campaign Portal | Preflight | Founding Beta | Investors | Marketplace | Login

ACT ONE — IDENTITY

(Hero section — replaces "EXECUTIVE WEBSITE PERFORMANCE")

Eyebrow: A WEB IS WOVEN

Headline: So is website intelligence.

Subhead: Orb Weaver doesn't crawl your website. It weaves your pages, products, services, customer journeys, and knowledge into a living operational structure — a Website ORB that guides every visitor toward the right next step.

Primary CTA: Run a Free Preflight Scan **Secondary CTA:** Launch Dashboard

Utility links (unchanged): [Campaign, Beta & Investor Portal](#) · [Explore Business Features](#)

Stat bar (unchanged, repositioned as proof strip under hero): REDUCE VISITOR FRICTION · INCREASE COMPLETED JOURNEYS · KEEP TRUST AND CONTROL

ACT TWO — MECHANISM

(Combines former sections 1–4: Business Problem, Solution, Outcomes, Demo)

2.1 The Old Way

Eyebrow: WHAT A CRAWL GIVES YOU

Headline: A crawl tells you what your website is. It doesn't tell you what your website can become.

Body: Most websites make visitors work too hard. Valuable visitors drop when pages feel unclear, navigation paths are fragmented, and next steps are easy to miss. A crawler can index every page — but indexing isn't understanding. Teams still lose revenue when users abandon forms, leave carts, or never reach the right action.

2.2 What Weaving Actually Does

Eyebrow: WHAT WEAVING GIVES YOU

Headline: Orb Weaver gives your website an active guide that helps visitors finish.

Body: Orb Weaver understands each page in context, responds naturally to visitor intent, and guides people to verified next steps — so they can complete high-value journeys with confidence. It doesn't just know your pages exist. It understands why they exist, how they connect, and what a visitor needs from each one.

Supporting line: Your website isn't a collection of pages. It's a web. And webs are woven.

2.3 See It Work

Eyebrow: INTERACTIVE GUIDANCE DEMONSTRATION

Headline: Watch Weaver guide visitors in real time.

Body: See how interactive Point-and-Ping guidance helps visitors locate verified controls, follow clear actions, and complete their path — live, on your own site.

CTAs: Ask Weaver · See How It Works · Start Demonstration with Preflight

2.4 Business Outcomes

Eyebrow: MOVE THE METRICS LEADERSHIP TEAMS CARE ABOUT

Headline: Orb Weaver is designed to improve conversion quality, not just add a widget.

- **Reduce visitor confusion** — Help people understand where to go and what to do next.
 - **Increase completed journeys** — Guide users from intent to completion across forms, checkout, and service workflows.
 - **Reduce abandonment** — Support visitors at hesitation points before they drop out.
 - **Improve engagement quality** — Create clearer, more useful interactions that keep visitors progressing.
 - **Strengthen trust** — Use verified guidance and transparent behavior instead of guesswork.
 - **Accelerate decision speed** — Shorten time from first visit to confident action.
-

ACT THREE — TRANSFORMATION

(Replaces former sections 5–7: Security, Technology, CTA — now framed as outcome, not spec sheet)

3.1 The Payoff

Eyebrow: WHAT MONDAY MORNING LOOKS LIKE

Headline: Your website becomes the best-informed employee you'll ever hire.

Body: Not a service you rent. An intelligence you own. Every visitor greeted. Every question answered with context. Every page working together instead of sitting in isolation. Instead of a website that waits for someone to figure it out, you get one that works.

3.2 Trust, Carried Through

Eyebrow: SECURITY AND TRUST

Headline: Trustworthy guidance, governed actions, accountable behavior.

Body: Orb Weaver guides with verified state, bounded permissions, and explicit control governance — so business guidance remains safe, truthful, and dependable. An employee this informed is only valuable if it's also one you can trust completely.

CTA: See Security Design

3.3 Under the Experience

Eyebrow: TECHNOLOGY OVERVIEW

Headline: Built on website intelligence, verification, and runtime orchestration.

Body: Under the experience, Orb Weaver compiles website structure, verifies navigation targets, and coordinates guidance using governed runtime capabilities — so visitor help remains precise and actionable, not improvised.

3.4 Close

Eyebrow: CALL TO ACTION

Headline: Make your website easier to complete, not just easier to browse.

Body: Start with a free Preflight to see where visitors lose momentum — and where Orb Weaver can deliver measurable business impact.

CTA: Run Free Preflight

Notes for Copilot implementation

- Act One is the emotional hook — keep it short, do not let the eyebrow/headline pair exceed what's shown; no additional subhead lines.
- Act Two carries the functional proof (problem → mechanism → demo → metrics) — this is the section most likely to need real component wiring (existing Point-and-Ping demo, existing metrics grid); copy is final, layout/components can reuse what's already built for the old sections 1–4.
- Act Three reframes Security and Technology as *evidence for the payoff claim*, not standalone spec sections — headline/body copy is new, but existing Security and Technology page links/CTAs are unchanged and should route the same as before.
- "Best-informed employee" is the flagship line for this page. Vertical-specific pages (e.g., dealership landing page) should NOT reuse this line verbatim — they get their own concrete version (e.g., the automotive "salesperson who has memorized every vehicle" framing), so the general homepage claim and the vertical proof don't read as duplicated copy.
